Search & AI Consultancy

#BASED Meetup?

With the boom of large language models (LLMs), **search (informational retrieval)** has become a commodity.

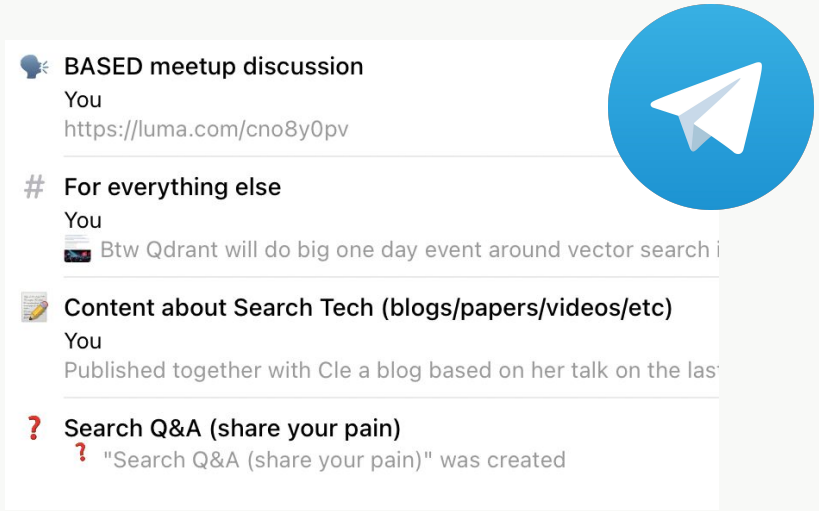

Suddenly, all kinds of tech-ies **have to** deal with search now, to **provide their AI-powered solutions with knowledge-access tools** – a source of truth against AI hallucinations.

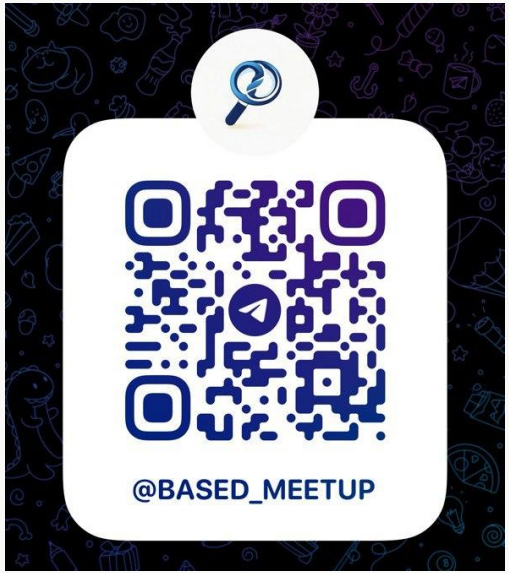

This search (r)evolution, naturally, led to “a lot of pain-no gain” & square-shaped wheels (re-)invention

Our goal is to **channel pain into gain** by creating a **community** where professionals & enthusiasts **discuss** the latest trends, breakthroughs and challenges in **modern search**.

#BASED Channel (Telegram)

Why? To apply for speaking, to suggest new meetup formats, to share search-related pains, to find a company for a summer hike...

About Today

18:15 - 18:30, Opening Note & KeyNote by Sponsors (**TNG Consulting GmbH**); Introducing #BASED space format

18:30 - 19:00, Deciding together tonight's #BASED space schedule

19:00 - 20:00, #BASED space: OpenSpace + BarCamp:)

20:00 - 20:01/2, Closing Note

20:01/2 - 21:00, Even More FreeStyle Networking with 🍺 & 🍕

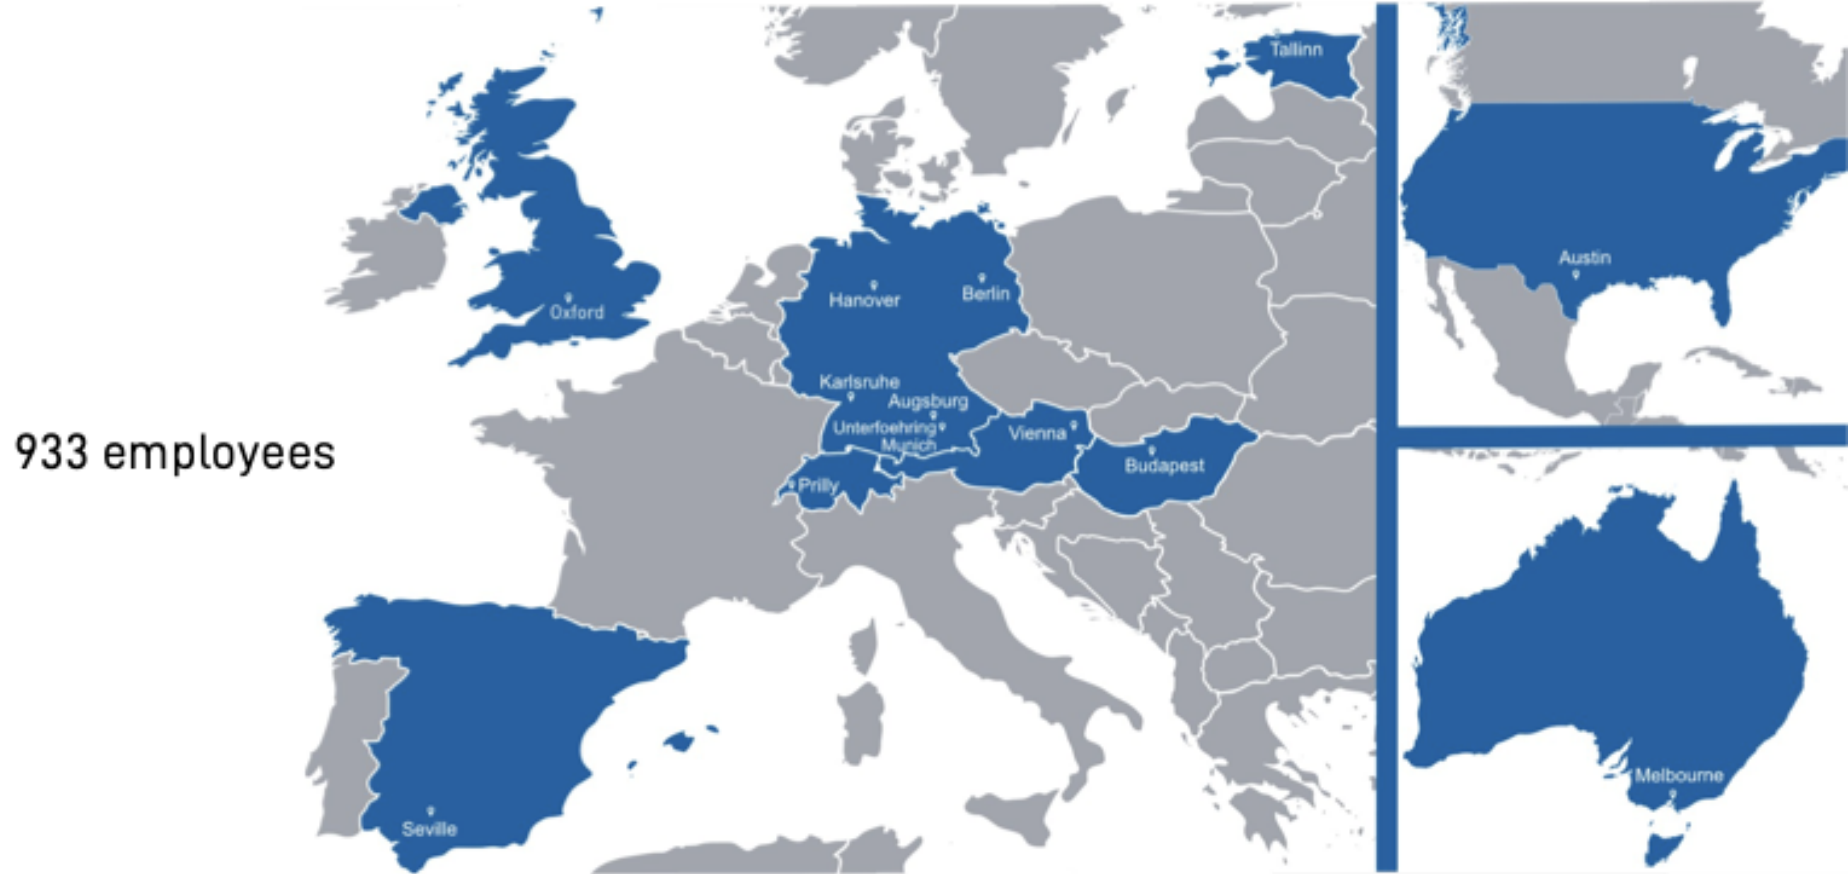

TNG TECHNOLOGY CONSULTING

We solve hard AI problems.

TNG TECHNOLOGY CONSULTING

933 employees

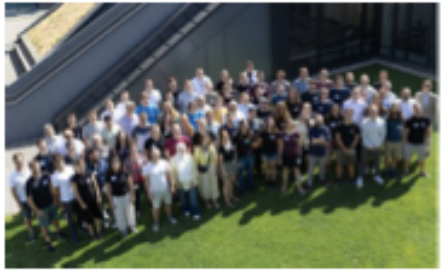

TNG summer retreat 2026 across eight locations

Our annual summer retreat brings our team together to discuss TNG's strategic development and improve processes, both internally and for our client work.

For this year's edition, over 900 colleagues gathered in Munich, Karlsruhe, Berlin, Hamburg, Cologne, Budapest, Oxford, and Melbourne. More than 75 discussion sessions and workshops took place in an Open Space format. Topics ranged from agentic AI, security and agent sandboxing to code reviews in the AI era. The program also covered software maintainability, building secure products for clients, and running local AI models.

#BASED Space: OpenSpace + BarCamp

18:30 — 18:45 Bring your topics. Write each on a sticky note from the writing station, stick it on the whiteboard. You'll have 10-15 minutes!:)

18:45 — 18:55 We (orgs) build the schedule. We sort the notes into a grid/schedule. P.S. We might ask you what your note means:)

19:00 — Round 1.

* Pick a room, **~20 min** of discussion.
* **~19:25** back to the main room. Each room shares takeaways, 1–2 min.

19:30 — Round 2. Same thing.
20:00 — transition to freeStyle networking with pizza :)

#BASED Space Rules

A topic can be anything. A question, a work problem, a story, or a strong opinion is enough. However, **no sales pitches**: if your topic is your product, the discussion is the problem, not the product.

Proposed the topic of the room? Feel free to kick off the conversation!

Free Mobility Rule: switch rooms anytime, as long as it doesn't disturb others:)

Free Train of Thought Rule: if the topic changed through the conversation, then that's what it was supposed to be!

No Fomo Rule: After each round, someone from the room shares the takeaways in 1–2 minutes with everyone.

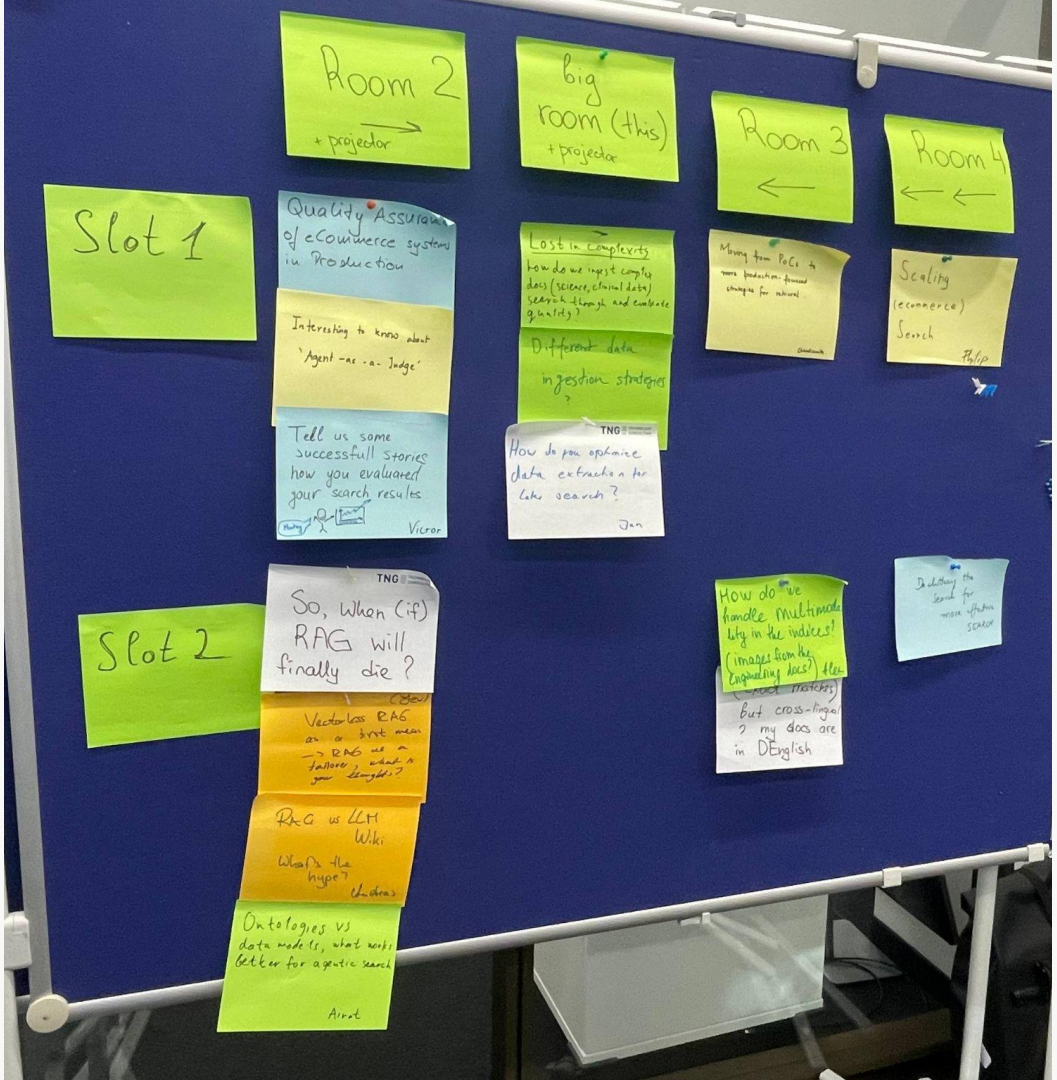

#BASED Space: Let’s Collect Topics

Your topic goes on the whiteboard, one topic per sticky note.
Write BIG & CLEAR:)

Anything around **search** / **information retrieval** counts.
For example:

- *"How do you evaluate Agentic RAG?*
  Have you heard about Agent-as-a-Judge?"
- *"I thought hybrid search was a silver bullet, but it works badly.*
  What now?"
- *"Before, we had clicks. Now, with chatbots, we don't know*
  how to collect feedback..."
- *"How we solved on-device search"*

Room 2
+ projector
big room (this)
+ projector
Room 3
Room 4
Slot 1
Quality Assurance of eCommerce systems in Production
Interesting to know about 'Agent-as-a-Judge'
Tell us some successfull stories how you evaluated your search results
Victor
Lost in complexity
how do we ingest complex data (science, clinical data) search through and evaluate quality?
Different data ingestion strategies
TNG
How do you optimize data extraction for later search?
Jan
Moving from PoCs to more production-focused strategies for natural
Scaling (ecommerce) Search
Philip
Slot 2
TNG
So, when (if) RAG will finally die?
Vectorless RAG as a first mean -> RAG we a tailored what is your thoughts?
RAG vs LLM Wiki
What's the hype?
Ontologies vs data models, what works better for agentic search
Airat
How do we handle multimodality in the indices? (images from the Engineering docs?)
But cross-lingual ? my docs are in DEnglish

Networking t-i-i-i-me 🍺 & 🍕

We want to make this meetup better, as our **worst nightmare** is that it ends up being useless or boring.

Tell us what you'd like to learn next time, and we, on our side, will make sure there **is** this next time!:)
