Stickies

Scaling (ecommerce) Search — Philip

Different data ingestion strategies ?

Quality Assurance of eCommerce systems in Production — Petra

Is my query semantic or keyword (lexical)? → weights in hybrid search

How do you optimize data extraction for later search? — Jan

Lost in complexity: how do we ingest complex docs (science, clinical data) search through and evaluate quality? — Airat

(dev) Vectorless RAG as a first mean → RAG as a fallback, what is your thoughts?

How do we handle multimodality in the indices? (images from the Engineering docs?) tlev

Moving from PoCs to more production-focused strategies for retrieval.

RAG vs LLM Wiki — What's the hype? — Andreas

(dev) Is there a common way to sync data in real-time between different vector-indexes eg. between Relevant & Operational ~ CDC + Schema conversion

De-cluttering the search for more effective SEARCH

So, When (if) RAG will finally die?

Ontologies vs data models, what works better for agentic search — Airat

search (exact matches) but cross-lingual? my docs are in DEnglish

Interesting to know about 'Agent-as-a-Judge'

Tell us some successfull stories how you evaluated your search results — Victor

Philip:

e-commerce use case

user info
- country

⊕: We know your location for sure

--- > still can browse in other language

search terms short → can not be assigned lang.

Philip:

track story of searches

VICTOR:
Lingua franko

translate in one lang

Philip:

Multi-lingual embed.

Jan:

RAG over multilingual data?

Philip:

small case?

Model lang. → to classify

Metadata

fallback

Vector

→ search in right index

ES: full lans.

EN | DE | ES

index

But lose info on lans.

ARMEET:

BUT: LLM is overhead

Alex:

Small classifie-

→ risk index if LLM should do?

backend

LLM

classify

index DE

index EN

Eng. docs

changes

- tables
- graphs
- schemes.

Computations
- numbers
